Comparison Visilean, Outbuild, Aphex, Uconia

Here is the updated competitor table followed by the context file above.

Competitor Feature Comparison — Updated February 2026

	Feature	Aphex	Visilean	Outbuild	Uconia
1	**Core Methodology**	Collaborative multiplayer scheduling with LPS promise/delay workflow	LPS + Lean-BIM integrated production management platform	LPS-native — master schedule connects directly to field lookahead	LPS operating system — encodes full LPS cycle as structured workflow
2	**Primary Market**	Large infrastructure & civil — UK, Europe, Australia. Clients include Skanska, Balfour Beatty, Costain	Global — building, infrastructure, data centres, utilities. Strong in Middle East and Asia	North American GCs and trade partners — strong with superintendents and foremen	GCs building data centres; large-scale building projects (Europe primary)
3	**Lookahead Planning**	✅ Core feature — filterable by trade, date range, owner	✅ Core feature — bottom-up collaborative planning window by Owner, Location and Trade	✅ Core feature — activities pulled down from master schedule; super builds detail on top	✅ Core feature
4	**Weekly Work Plan**	✅ Live — tasks promised with committed dates	✅ Live	✅ Live — field team updates progress from iPad app as they walk the site	⚠️ WWP can be created but no dedicated WWP view yet
5	**Task Commitment / Promise Workflow**	✅ Structured — tasks explicitly set to Promised status; any date change requires a delay reason	⚠️ Ready/Approved states exist but commitment enforcement is weaker — users flagged inability to formally commit as a gap	✅ Superintendent submits tasks from lookahead; PM approves or rejects Schedule Impact Requests in real time	⚠️ Commitment workflow exists but tasks with unresolved constraints are not blocked from commitment

6	**Constraint / Blocker Management**	⚠️ Blockers feature — overdue blockers highlighted on map; no structured capture-assess-assign-resolve workflow	⚠️ Constraint tracking present — users flagged constraints not being identifiable by trade as a gap	✅ Roadblocks feature — tracks all site issues; Procore RFIs appear automatically; % Roadblock Removed (PRR) tracked	✅ Structured LPS workflow — capture, assessment, assignment, resolution, analytics
7	**Readiness Gating**	❌ Tasks can be promised regardless of blocker status	❌	❌	❌ Not enforced — constraints visible but do not block commitment
8	**Schedule Impact Requests**	❌	❌	✅ Field submits change request with impact detail; PM approves/rejects; critical path impact shown in preview before approval	❌
9	**Schedule Change Log**	⚠️ Published versions create a history but no automatic change log	❌	✅ Automatic chronological log of every schedule change — who, what, when	❌
10	**PPC Tracking**	⚠️ Delay concentration via Aphex Insight — no explicit PPC score natively	⚠️ Present — users flag % progress calculation as unreliable	✅ Native PPC + Percent Roadblock Removed (PRR) + S-Curve — auto-generated from field updates	✅ Native — structured PPC with variance categorisation
11	**Variance / Delay Reason Capture**	✅ Delay reasons required when promised tasks slip — full delay history per task	✅ Reason for variance mapped in system	✅ Variance reasons captured natively — feeds analytics automatically	✅ Structured variance categories — feeds weekly closeout and learning loop
12	**Analytics & Reporting**	✅ Aphex Insight — delay concentration, performance by owner/subcontractor; Power BI API + templates	⚠️ Power BI integration — no native analytics dashboard	✅ Native analytics auto-generated from field progress; executive dashboard coming in Outbuild Pro (2026)	✅ Basic analytics and reporting native on platform; complex bespoke analytics via Power BI integration
13	**Power BI Integration**	✅ API + free templates	✅ Live integration	❌	✅

14	**AI Features**	❌	❌	➡️ Outbuild Pro AI Copilot — proactive risk insights and plain language decision guidance (early 2026)	➡️ Planned — AI embedded into dashboards for insight generation; natural language prompts for report generation from project data
15	**Portfolio / Multi-Project View**	❌	✅ Portfolio view across projects	✅ Project Hub — card and timeline view showing open roadblocks, SIRs, progress, variances across all projects	❌
16	**Master Schedule Integration**	✅ P6, Asta, MS Project	✅ P6, MSP, Asta, Excel	✅ P6 import + export (XER and XML); Autodesk Build two-way sync	✅ P6 import only (Connect module — weekly XER review in progress)
17	**Convert Schedule Activities to Lookahead**	✅ Backlog staging — imported tasks held before being merged into plan	❌	✅ Select activities from master schedule and convert to lookahead tasks in bulk — dates, duration, hierarchy preserved	✅ Hook feature — sync tasks from P6 into lookahead window
18	**Spatial / Map View**	✅ Real-world GIS + floor plans; colour-coded by owner/sub/shift; clash detection; drone overlay; ArcGIS integration	✅ GIS maps for linear infra; 2D markups for building floors; 4D BIM with plan vs. actual colour overlay	❌	➡️ Planned — Location Centric View with 2D floor plan and task overlay
19	**Clash Detection**	✅ Automatic — two trades in same area flagged on map; icon persists until resolved	❌	❌	❌
20	**Staging Diagrams**	✅ Auto-built from map — day-by-day sequence deck exportable as PDF	❌	❌	❌
21	**BIM Integration**	❌	✅ Full 3D/4D BIM — plan vs. actual colour slider; Autodesk BIM 360 integration	❌	❌

22	**Takt Planning**	❌	✅ Native Takt Planning — Wagons across Zones with up to 3 levels of zone hierarchy	❌	❌
23	**Resource Planning**	✅ Labour, plant, materials — resource overlay on Gantt	✅ Cost module + resource allocation per activity	❌	➡️ Planned
24	**Daily Meetings / Huddle**	✅ Structured daily huddle feature	❌	❌	❌
25	**Site Diary**	➡️ Coming soon	✅ Digital site diary	❌	❌
26	**Commissioning Solution**	❌ No commissioning-specific features	⚠️ Commissioning checklists for data centre projects — structured process for coordinating trades across Level 3 commissioning	❌ No commissioning-specific features	➡️ Planned — commissioning solution with rule builder for sub task generation
27	**Data Centre Focus**	⚠️ Used on major building projects but no data centre specific positioning	✅ Explicit data centre focus — dedicated landing page, case studies (Mace), claims 43% programme efficiency on data centre projects	❌ No data centre specific positioning	✅ Primary target client segment — GCs building data centres
28	**Quality & Safety Checklists**	❌	✅ Dynamic checklists with photo upload, sign-off, and handover workflow	❌	➡️ Planned
29	**Subcontractor / Field Experience**	⚠️ Shared plan view — subcontractors assigned tasks and update via mobile	✅ LiveSite mobile app — field updates, photos, percentage and quantity progress, offline mode, 9 languages	✅ iPad app — superintendent updates progress as they walk site; SIR submission from field	➡️ Planned — supervisor tablet experience
30	**Mobile App**	✅ iOS	✅ iOS + Android — full LiveSite offline-capable field app	✅ iPad (iOS + Android smartphone coming early 2026)	✅ Full mobile app
31	**Offline Mode**	❌	✅	❌	➡️ Planned

32	**Share Plan Without Login**	✅ Read-only web share via URL — external parties can group, sort, filter and print	❌	✅ PDF export from iPad — shareable without login	❌
33	**PDF Export**	✅ Gantt, board, list, map — day-by-day sequence deck from map	❌	✅ Schedule and lookahead PDF from iPad; customisable formatting	⚠️ PDF export of basic and complex dashboards only — lookahead and WWP not yet exportable
34	**Procore Integration**	❌	❌	✅ Deep — RFIs as roadblocks; submittals sync procurement dates; directory sync	❌
35	**Autodesk Build Integration**	❌	✅ BIM 360	✅ Direct two-way sync	❌
36	**API**	✅	❌	✅	❌
37	**Free Trial**	✅	✅ 30-day	✅	❌
38	**Pricing Model**	Per user (~£35/month)	Subscription — custom	Per project + Outbuild Pro add-on	Per project — scales with client size

---

Strategic Summary

		Aphex	Visilean	Outbuild	Uconia
1	**Strongest at**	Spatial coordination, map/clash detection, staging diagrams, delay history, large infra clients	BIM + Takt planning, field mobile app, data centre focus, commissioning checklists, quality workflows	Schedule-to-field connection, ease of use, Procore/Autodesk ecosystem, schedule change auditability, portfolio visibility	Structured LPS constraint workflow, PPC tracking, variance learning, Power BI integration

2	**Weakest at**	No native PPC, no portfolio view, no Procore/Autodesk, no commissioning, no data centre positioning	Weaker analytics, no API, % progress reliability flagged by users, no schedule change log	No spatial view, no resource planning, no commissioning, no data centre positioning, US-centric	No spatial view, no readiness gating enforcement, no schedule change log, no portfolio view, no offline mode, PDF export limited to dashboards
3	**Commissioning**	❌ Nothing	⚠️ Checklists only — not a full commissioning workflow	❌ Nothing	➡️ Rule builder for sub task generation — most structured commissioning approach in the set when shipped
4	**Data Centre Positioning**	Not targeted	✅ Actively positioned — biggest direct competitor for Uconia's target segment	Not targeted	✅ Primary target segment
5	**Biggest threat to Uconia**	Strong brand with tier-1 GCs; spatial features Uconia is still building	**Most direct competitor** — same data centre target market, active commissioning features, strong field app, and BIM capability already live	Native PPC and SIR workflow directly compete with Uconia's LPS positioning	—
6	**Uconia's clearest edge**	Structured constraint workflow and native PPC — Aphex has neither	No structured constraint workflow, no readiness gating, weaker analytics — and Uconia's planned commissioning solution will be more structured than Visilean's checklist approach	No commissioning, no spatial view, no Power BI — Uconia ahead on LPS depth and analytics	—

Key commissioning finding: Visilean is the only competitor with any commissioning-specific functionality, and it is limited to checklists for data centre projects. Aphex and Outbuild have nothing. Uconia's planned commissioning solution with a rule builder for sub task generation would be the most structured commissioning workflow in the competitive set when shipped — and directly addresses the most critical phase of Uconia's primary target project type.
